Introduction

I research vulnerabilities in system software. In Google Chrome, I have reported two full-chain exploits that include a browser sandbox escape, one of which earned a $250,000 bug bounty. In Linux KVM, I found a guest-to-host VM escape (CVE-2026-99082) and submitted it to kvmCTF. I have also found multiple remote code execution bugs in Cloudflare Workers and MongoDB, and ranked #1 on the 2026 HackerOne Korea leaderboard.

I started with CTFs in high school, and have since reached the DEF CON CTF finals and won multiple CTF competitions. I am currently studying at the KAIST School of Computing. I am interested in both AI for security research and the security of AI systems.

Vulnerability Research

Google Chrome

- **Full Chain Exploit #1**
- **Full Chain Exploit #2**
- Browser Sandbox Escape ×4 #559115426 #572288856 #572401251 #573174984
- V8 Heap Sandbox Escape ×2 #488927521 #560771373
- Blink #573335176 v8CTF 0day submission

Other reports

Linux KVM

- **VM Escape** CVE-2026-99082 kvmCTF Full VM Escape
- Guest to Host Panic CVE-2026-98164 kvmCTF Host Panic

Cloudflare

- Workers Remote Code Execution ×2
- cloudflare/workerd Remote Code Execution ×6

Other reports

MongoDB

- Remote Code Execution ×7

Other reports

MariaDB

- Remote Code Execution

Envoy Proxy

- Unauthenticated Remote DoS CVE-2026-73550

Chia Blockchain Network

- Vulnerability Reports

Experience

Team Lead, Security Engineer Sep 2026 – Present
EUCLIDSOFT
Vulnerability analysis and development of AI security products.

Independent Vulnerability Researcher & Bug Bounty Hunter Jul 2026 – Aug 2026
Independent
Vulnerability research across browsers, kernels, cloud infrastructure, and databases, including open-source research and exploit development. Ranked #1 on the 2026 HackerOne Korea leaderboard.

Cyber Operations Specialist Dec 2024 – Jun 2026
Cyber Operations Brigade, Republic of Korea Army
Analyzed web and software vulnerabilities and validated real-world attack scenarios on red team missions.

Projects

LLM orchestration for vulnerability analysis
An LLM-orchestrated analysis workflow that identified a memory disclosure bug in zlib.

LLM orchestration for CTF challenges
Before general-purpose coding agents were common, a main/sub-agent system on LangChain and LangGraph that combined tool calls, web search, and brainstorming-style reasoning to solve CTF challenges.

Selected Awards

2026	1st	CCE 2026 Final, Overall
	1st	Dreamhack Invitational 2026 Qualifier International
	1st	CCE 2026 Qualifier, General Division
	3rd	Codegate CTF 2026
	Finalist	DEF CON CTF 2026 International
2025	1st	CyKor CTF 2025 International
	1st	FIESTA 2025 Financial Security Threat Analysis
	1st	CCE 2025 Qualifier, Public Sector
	1st	WhiteHat Contest 2025 Qualifier, Soldier Track
	1st	ACDC 2025 Qualifier, Student Division
	1st	KoS CTF 2025
	2nd	CCE 2025 Final, Public Sector
	2nd	WhiteHat Contest 2025 Final, Soldier Track
	3rd	HackTheon Sejong 2025, Advanced Division International
	3rd	corCTF 2025 International
	4th	LG U+ Security Hackathon 2025
2024	1st	LG U+ Security Hackathon 2024
	1st	Chungcheong Regional Cybersecurity Competition 2024
	4th	DEF CON CTF 2024 Final International
2023	1st	WhiteHat Contest 2023 Junior Final
	1st	WhiteHat Contest 2023 Junior Qualifier
	1st	WACON 2023 Junior Qualifier
	2nd	WACON 2023 Junior Final
	2nd	CCE 2023 Final
	7th	DEF CON CTF 2023 Final International
2022	2nd	WhiteHat Contest 2022 Final
	2nd	JBU CTF 2022
	Finalist	Codegate CTF 2022 Junior

Education

School of Computing — Feb 2024 – Present
KAIST

Best of the Best, 11th cohort — Jun 2022 – Mar 2023
KITRI
National training program for next-generation security specialists.
